JE Pistons releases billet pistons for Subaru WRX STi

JE Pistons has announced the release of the first billet pistons available for Subaru EJ257 engines! Originally created for the Crawford Performance Unlimited AWD Time Attack Subaru and Ken Block's Gymkhana racecar, these pistons are now available to the public. The new pistons are 100% CNC machined from high quality 2618-T6 wrought aluminum bar stock and are specifically designed for high horsepower road and drag race engines. The pistons feature internal and external bracing, a unique donut dish crown and an application-specific under crown profile that properly redistributes heat and reduces stress concentrations experienced in high boost Subaru engines. Unlike forged pistons, the billet pistons are machined on every surface allowing for all unnecessary weight to be removed during manufacturing. The result of this new process is a weight reduction of up to 35 grams compared to other piston packages available! High quality 9310 steel wrist pins and JE Pro Seal Rings are included. For severe racing applications, upgraded Diamond Like Carbon (DLC) coated wrist pins are available.

Features:

- 100% CNC machined billet piston
- Manufactured from high quality, certified 2618-T6 aluminum alloy
- Specifically designed for high horsepower Subaru racing engines up to 1000hp
- Internal and external strut braces
- Up to 35 grams lighter
- Premium 9310 steel wrist pins, DLC upgrade available
- JE Pro Seal Piston Rings
- Tru Arc locks for easy installation

Retail price: \$1300 including rings, wrist pins and locks.
