Chevy LS7 Forged Pistons for Forced Induction

JE Pistons now offers "FSR" forged pistons for forced induction and nitrous-fed Chevy LS7 engines. Specifically designed for high horsepower engines, these pistons are perfect for both racing and street applications. The foundation of the new design is a heavy duty 2618 alloy "forged side relief" forging that provides plenty of clearance from the reluctor wheel. The 22cc dish provides a forced induction friendly 9.4:1 compression ratio when used with factory LS7 head gaskets. Every piston is engineered, manufactured and inspected at JE Piston's advanced Huntington Beach, California facility.

FEATURES:

- Specifically designed for forced induction/nitrous applications
- Heavy duty 2618 alloy FSR Forging
- 22cc Dish (9.4:1 compression ratio)
- Perfect for racing and high horsepower street vehicles
- Includes 2.250" long premium wrist pins and wire locks
- Accepts a 1.5mm, 1.5mm, 3.0mm JE Pro Seal Ring Package (J6800 series)
- Made in the USA
